

March 6, 2026

Honorable Andy Barr
Congressman
2430 Rayburn House Office Bldg.
Washington, DC 20515

Congressman Barr,

Please accept this letter as an expression of The Scott County Fiscal Court support of FY 2027 funding appropriation for the Georgetown Municipal Water and Sewer Service (GMWSS) Burton Tank Pressure Zone Elevated Storage Tank Project through the Community Project Funding (CPF) program.

Utility services satisfy basic needs for customers that significantly improve quality of life within a community. The availability of affordable and reliable water infrastructure stimulates economic growth, protects public health, and supports long-term community sustainability. Without well-maintained utility infrastructure, economic viability and public safety are significantly impaired.

GMWSS owns and operates water and sanitary sewer infrastructure in Georgetown and Scott County, Kentucky, including three wastewater treatment plants, a water treatment plant, a water distribution network, and a sanitary sewer collection and conveyance system. Water and sanitary sewer service is provided for approximately 15,000 residential, commercial, industrial, and institutional customers throughout Scott County.

The Burton Tank Pressure Zone serves customers in northern Scott County, an area where municipal water service was originally expanded in the late 1990s and early 2000s through collaboration between the City of Georgetown, Scott County Fiscal Court, and GMWSS. Infrastructure installed at that time included waterlines, a booster pump station, and an elevated storage tank intended to meet existing demand and limited growth.

Since that time, significant residential development and subdivision of rural tracts has occurred throughout northern Scott County. These additional connections and the resulting demand have consumed the available water capacity created by the earlier infrastructure projects. As a result, GMWSS must carefully monitor system operations to maintain adequate service levels for existing customers while planning necessary upgrades for future demand.

The proposed Burton Tank Pressure Zone Elevated Storage Tank Project will provide critical additional storage capacity to support system reliability, maintain adequate pressure in the service area, and allow GMWSS to continue providing safe and dependable drinking water to residents of Scott County. Elevated storage is a vital component of any distribution system, helping to stabilize pressure, meet peak demand periods, and support emergency response capabilities.

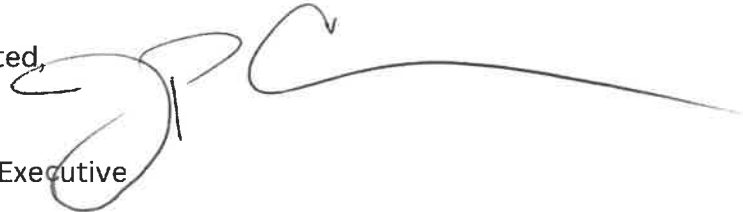

GMWSS continues to pursue operational improvements, engineering analysis, and long-term planning to address system demands in northern Scott County. However, capital infrastructure such as additional elevated storage is necessary to ensure long-term system resilience and minimize impacts to current ratepayers while accommodating the area's growth.

Our organization recognizes the importance of this project to the community and strongly supports the request of GMWSS for funding through the Community Project Funding program. This investment will help ensure reliable water service, protect public health, and support continued economic growth throughout Scott County.

Thank you for your continued support of critical infrastructure projects that benefit the residents of the Commonwealth of Kentucky.

Respectfully submitted,

Joe Pat Covington
Scott County Judge Executive

Dear Representative Barr:

As state senator of District 17, I write in support of the \$5,000,000 FY 2027 funding request for the Georgetown Municipal Water and Sewer Service (GMWSS) Burton Tank Pressure Zone Elevated Storage Tank Project through the Community Project Funding (CPF) program.

The proposed Burton Tank Pressure Zone Elevated Storage Tank Project will provide critical additional storage capacity to support system reliability, maintain adequate pressure in the service area, and allow GMWSS to continue providing safe and dependable drinking water to residents of Scott County. In recent years, significant residential development and subdivision of rural tracts has occurred throughout northern Scott County. These additional connections and the resulting demand have consumed the available water capacity created by earlier infrastructure projects. As a result, GMWSS continues to pursue operational improvements, engineering analysis, and long-term planning to address system demands in northern Scott County. Capital infrastructure such as additional elevated storage is necessary to ensure long-term system resilience and minimize impacts to current ratepayers while accommodating the area's growth.

Your consideration of this request is greatly appreciated. Feel free to contact me if I can be of further assistance.

Sincerely,

A handwritten signature in black ink that reads "Matt Nunn".

Washington, D.C. 20515

Dear Congressman Barr:

I am writing to express my support of a FY 2027 funding appropriation through the Community Project Fund in the amount of \$5 million for the Georgetown Municipal Water and Sewer Service (GMWSS) Burton Tank Pressure Zone Elevated Storage Tank Project

GMWSS owns and operates water and sanitary sewer infrastructure in Georgetown and Scott County, Kentucky, including three wastewater treatment plants, a water treatment plant, a water distribution network, and a sanitary sewer collection and conveyance system. Water and sanitary sewer service are provided for approximately 15,000 residential, commercial, industrial, and institutional customers throughout Scott County. The Burton Tank Pressure Zone serves customers in northern Scott County, an area where municipal water service was originally expanded in the late 1990s and early 2000s through collaboration between the City of Georgetown, Scott County Fiscal Court, and GMWSS. Infrastructure installed at that time included waterlines, a booster pump station, and an elevated storage tank intended to meet existing demand and limited growth.

The proposed Burton Tank Pressure Zone Elevated Storage Tank Project will provide critical additional storage capacity to support system reliability, maintain adequate pressure in the service area, and allow GMWSS to continue providing safe and dependable drinking water to residents of Scott County. Elevated storage is a vital component of any distribution system, helping to stabilize pressure, meet peak demand periods, and support emergency response capabilities.

GMWSS continues to pursue operational improvements, engineering analysis, and long-term planning to address system demands in northern Scott County. However, capital infrastructure such as additional elevated storage is necessary to ensure long-term system resilience and minimize impacts to current ratepayers while accommodating the area's growth. This investment will help ensure reliable water service, protect public health, and support continued economic growth throughout Scott County.

The Honorable Andy Barr

Dear Representative Barr:

I am writing to express my support for Georgetown Municipal Water and Sewer Service (GMWSS) Burton Tank Pressure Zone Elevated Storage Tank Project's application to the FY 2027 Community Project Funding for \$5 million. The proposed project will construct a new elevated water storage tank in the Burton Tank Pressure Zone in northwest Scott County, providing additional water storage capacity to support the area's growing population and development.

The Burton Tank Pressure Zone serves customers in northern Scott County, where municipal water service was expanded in the late 1990s and early 2000s through a partnership between the City of Georgetown, the Scott County Fiscal Court, and GMWSS. Since that time, significant residential growth has increased demand on the existing water infrastructure. The additional elevated storage will help maintain adequate system pressure and support peak water demand in this rapidly growing area.

Reliable water infrastructure is essential for protecting public health, supporting emergency response capabilities, and sustaining economic growth. The project will strengthen the resilience of the local water system while ensuring that residents and businesses in Scott County continue to receive safe-drinking water. Please reach out to my office if you have any questions.

Sincerely,

A handwritten signature in cursive script that reads "Vanessa Grossl".

Re: FY 2027 – Community Project Funding – Burton Tank Pressure Zone

Congressman Barr,

Please accept this letter as an expression of the City of Georgetown's support of a FY 2027 funding appropriation for the Georgetown Municipal Water and Sewer Service (GMWSS) Burton Tank Pressure Zone Elevated Storage Tank Project through the Community Project Funding (CPF) program.

Utility services satisfy basic needs for customers that significantly improve quality of life within a community. The availability of affordable and reliable water infrastructure stimulates economic growth, protects public health, and supports long-term community sustainability. Without well-maintained utility infrastructure, economic viability and public safety are significantly impaired.

GMWSS owns and operates water and sanitary sewer infrastructure in Georgetown and Scott County, Kentucky, including three wastewater treatment plants, a water treatment plant, a water distribution network, and a sanitary sewer collection and conveyance system. Water and sanitary sewer service is provided for approximately 15,000 residential, commercial, industrial, and institutional customers throughout Scott County.

The Burton Tank Pressure Zone serves customers in northern Scott County, an area where municipal water service was originally expanded in the late 1990s and early 2000s through collaboration between the City of Georgetown, Scott County Fiscal Court, and GMWSS. Infrastructure installed at that time included waterlines, a booster pump station, and an elevated storage tank intended to meet existing demand and limited growth.

Since that time, significant residential development and subdivision of rural tracts has occurred throughout northern Scott County. These additional connections and the resulting demand have consumed the available water capacity created by the earlier infrastructure projects. As a result, GMWSS must carefully monitor system operations to maintain adequate service levels for existing customers while planning necessary upgrades for future demand.

The proposed Burton Tank Pressure Zone Elevated Storage Tank Project will provide critical additional storage capacity to support system reliability, maintain adequate pressure in the service area, and allow GMWSS to continue providing safe and dependable drinking water to residents of Scott County. Elevated storage is a vital component of any distribution system, helping to stabilize pressure, meet peak demand periods, and support emergency response capabilities.

GMWSS continues to pursue operational improvements, engineering analysis, and long-term planning to address system demands in northern Scott County. However, capital infrastructure such as additional elevated storage is necessary to ensure long-term system resilience and minimize impacts to current ratepayers while accommodating the area's growth.

Our organization recognizes the importance of this project to the community and strongly supports the request of GMWSS for funding through the Community Project Funding program. This investment will help ensure reliable water service, protect public health, and support continued economic growth throughout Scott County.

Thank you for your continued support of critical infrastructure projects that benefit the residents of the Commonwealth of Kentucky.

Respectfully submitted,

Burney Jenkins
Mayor, City of Georgetown

Dear Congressman Barr,

Please accept this letter as an expression of the Scott County Fiscal Court's support for the FY 2027 funding appropriation request for the Georgetown Municipal Water and Sewer Service (GMWSS) Burton Tank Pressure Zone Elevated Storage Tank Project through the Community Project Funding (CPF) program.

Reliable and affordable water infrastructure is essential to protecting public health, supporting economic development, and maintaining a high quality of life in our community. GMWSS provides critical water and sewer services to approximately 15,000 residential, commercial, industrial, and institutional customers throughout Georgetown and Scott County.

The Burton Tank Pressure Zone serves residents in northern Scott County, where municipal water service was expanded in the late 1990s and early 2000s through a partnership between the City of Georgetown, Scott County Fiscal Court, and GMWSS. Infrastructure constructed during that time was designed to meet the needs of the community at that time.

Since then, significant residential growth and development in northern Scott County have increased demand on the system and consumed much of the available water capacity created by earlier infrastructure investments.

The proposed Burton Tank Pressure Zone Elevated Storage Tank Project will provide essential additional storage capacity to maintain system reliability, ensure adequate water pressure, and support emergency response capabilities. This project will also allow GMWSS to continue delivering safe, dependable drinking water while accommodating continued growth in our community.

Scott County Fiscal Court strongly supports this funding request and recognizes the importance of this project for maintaining reliable water service, protecting public health, and supporting the long-term growth of Scott County.

Thank you,

Jared Hollon

Scott County Deputy Judge Executive
